(21) Application no.: Patent Application No. H04-065846 (71) Applicant: Akamatsu Rubber Kako K.K.

(22) Application date: March 24, 1992 (72) Inventor(s): Yoko Akamatsu

**(54) Key Top for Push Switch and Manufacture Thereof**

(57) [Abstract]

[Purpose] To provide a key top for a push switch, the main body of which can be sufficiently illuminated with a small quantity of light.

[Constitution] A moving contact 2b fixed to a key top main body 2a made of silicone rubber is formed of a thin film of gold having a thickness of not more than about 8000 Å.

[Effect] Electrically conductive thin films of not more than about 8000 Å allow visible rays to pass through, so the key top main body can be illuminated with a small quantity of light.
